ABOUT THE SEMINAR :

Cloud computing is the bleeding-edge technology in IT industry, today. It joins the ranks of Virtualization, grid computing and clustering, among others, in the IT industry. The problem is that, depending on your point of view, the definition of cloud computing can be quite different. Depending on your perspective, you could look at it from a business point of view or an application point of view, as well as others. This has created confusion on the definition and a fuzzy view as to what cloud computing is or even does.

Leveraging third-party computing capability over the network is a good way to cut costs, increase scale, and improve agility. The concept of cloud computing involves a data center somewhere in the world, or even multiple data centers scattered around the world. This is a paradigm shift from the historical client-server architecture where the network users owned, maintained, and operated their own network infrastructure, server rooms, data servers, and applications.

SEMINAR OBJECTIVES

This Seminar will provide a unique opportunity for the academic and industry professionals to understand the concepts, applications and challenges, and discuss prospects for future implementation.

The scope of the seminar will include:

- What is the Cloud? What is the difference between Cloud and Virtualization?
- Why should we move to the Cloud?
- Datacenter and Cloud Computing.
- Opportunities and Applications over the Cloud.
- Understanding the business value of the Cloud.
- Challenges, in particular, Security Issues.
- Future outlook for the Cloud Computing
- Career Opportunities for Cloud Professionals

IMPORTANT DATES :

Last Date for Submission of Abstract by authors	15 th October 2012
Intimation of Acceptance of Abstract	Within one week of receipt of Abstract
Last Date for Submission of Full Paper	26 th October 2012
Early Bird Registration Deadline	15 th October 2012
Last Date of Registration	20 th November 2012
